

East End Pest

MANAGEMENT

Over the past few years we have seen the use of "Organic cleaning supplies" become more and more popular. While we at East End Pest Management fully support this idea, and the use of safe cleaning products, we also have noticed that it is incredibly attractive to sweet feeding Ants. It may be ingredients such as :

Vanillin : a fragrance component or Botanical Isolate derived from Clove

Coconut Oil: which is high in carbohydrates may also be one of the main attractive components

The above mentioned ingredients as well as a host of other sweet smelling and alcohol based components are likely to blame for its incredible attractiveness to sweet feeding ants.

- **7th Generation**

- **Bona**

- **Murchison Hume**

- **Simple Green**

- **Dr Meyers**

- **Green Works**

- **Bio Farm**

- **Sustainable Earth**

Unfortunately, if any of these products are currently being used they may impede or completely nullify the effects of the service provided . We will be working to try and identify products that are safe which do not attract sweet feeding ants, once we do we will let you know!

If you have any questions or concerns please give us a call or visit us on the web at www.eastendpest.com.
