Insects and Spiders:

East End Pest Management has been facilitating careful and thoughtful Pest Control solutions for homes on the East End since 2004. Whether it be Sweet Feeding Ants in the kitchen, Crickets in the basement, Spiders, Roaches, Fleas or Bed Bugs. We typically rely on Integrated Pest Management skills to identify the catalyst which lead to infestation, so we can provide the most permanent solution possible. Most insects are attracted to areas with high moisture content.

Sweet feeding Ants are mainly attracted to sugars which can be found in processed foods, fruit, breads alcoholic beverages and pet food among other things. Spiders are superb predators and enter homes in search of a meal, as well as shelter from outdoor elements. Pests such as Roaches, Fleas, and Bed Bugs all have unique diets. Roaches are omnivorous scavengers and will consume any organic food source to survive including proteins, starches, sugars, and fatty foods. Fleas and Bed Bugs specifically require the protein found in blood meals to survive and go through their life stages. No matter what your Pest Control needs are, we will have the answer and the experience needed to provide it with unmatched professionalism and special care.

*For info on wood destroying organisms like Termites and Carpenter ants see:

Our Treatments and Services:

Structural Pest control services for Insects and Spiders are provided by trained, licensed technicians. The service generally involves the careful application of a contact insecticide to baseboards, basement sill plates, as well as around foundations and to cracks and crevices strategically, depending on where the target species congregates. For sweet feeding ants we also include disposable sweet ant bait stations free of charge.

Depending on your pest issue, sometimes preparatory action is required and possibly multiple applications may be necessary. Treatment plans can include traditional Interior / Exterior sprays, but may require additional tools such as growth regulators, aerosols, or bait stations. Each of these products may require their own specific safety protocols be followed. We will work with you to make sure your family and home are safe no matter the process.

Products:

Suspend® SC made by Bayer, is labeled as suitable for interior use with children and pets. Home owners can be home and indoors while this product is applied. Other products and insecticide information can be found on our web site at:
